

Lab6: design

Goal of this lab is to practice the transition from requirements to design. Propose a design capable of satisfying the requirements. Feel free to work alone or in team.

The design should be formalized in a document.

For diagrams (class diagram, package diagram, ecc) use tools (Signavio, StarUML, Astah, or else) or plantUml

1 – RVC - embedded software case

Start from the requirements as documented in Lab1 RVC 2025-7.pptx

1a propose a design

- Evaluate architectural patterns to use

- Define a class diagram for the low level design

1b validate that the design can support the requirements (functional properties of the design vs functional requirements)

2 – EZGas – application software case

Start from the requirements as documented in Lab1 EZGas 2025-5.pptx

2a propose a design

- Evaluate architectural patterns to use

- Define a class diagram for the low level design

2b validate that the design can support the requirements.
